

ANNEX

BASIC RANGE OF DISASTER-RELATED STATISTICS TABLES

Statistical tables are organised into worksheets according to basic components in the DSRF. The variables represent queries from a disaster-related statistics database. The tables are comprehensive of the Basic Range of Disaster-related Statistics and can be used by national agencies as a tool for assessing gaps and identifying opportunities to produce new statistics for disaster risk reduction.

Geo regions are officially designated geographic regions of relevance to the reporting, such as national (aggregate), regional or province (admin 02), district (admin 03), or other geographic regions important to the compilation or analysis, e.g. river catchments.

The relevant **time period** varies by tables and according to the analysis. For most impact statistics, a time period of at least 3-5 years is the most relevant given randomness and large year-to-year fluctuations in disaster occurrences and their impacts. DRRE tables, on the other hand, should be compiled annually, as with other national accounts.

A Summary tables of disaster occurrences

- A1 Summary table of disaster occurrences, by hazards types, scale, and geographic region

A tables count numbers of occurrences according to the hazards, scale and geographical classifications. Disaster occurrences are background statistics, i.e. they are useful for providing context variables for statistics in other tables

B Selected Background Statistics and Exposure to hazards

- B1a Population Background Statistics and Hazard Exposure by geographic regions
- B1b Population Exposure by social groups
- B2 Exposure of Land and Infrastructure by Hazard Type
- B3 Coping Capacity Background Statistics

B tables are for assessing availability of background statistics (sometimes also called "baseline statistics") as well as hazard exposure statistics, which are compiled prior to disaster occurrences, and updated over time according to the relevant categories (hazard types and geographic zonings). Exposure statistics serve multiple purposes, in particular for calculating indicators of risk, as well for assessing impacts.

C Summary tables of human impacts

- C1 Summary table of human impacts by hazards types
- C2 Summary table of human impacts by geographic regions
- C3 Summary table of human impacts by demographic and social categories

C tables are for compiling data related to affected populations (impacts on people) according to hazard types, geographic regions (national total, regions/states, municipalities, or river catchments), and demographic and social categories (age, gender, urban and rural, poor, and disabled). Selected optional sub-categories of impacts (e.g. major or minor injuries) are included in the table for compilation and compilers may wish to insert additional sub-categories according to the data availability and demand for statistics.

D Summary tables of direct material impacts in physical terms

- D1a Summary table of direct material impacts by hazards types
- D1b Summary table of direct material impacts by hazards types and geographic regions
- D2a Disruption of basic services from a disaster by hazard type
- D2b Disruption of basic services from a disaster, by geographic region

D tables are for recording direct material impacts in "physical" terms, such as area or number of buildings. The supplemental category of "critical infrastructure" are included in the tables as an initial proposal for measuring the critical material impacts of disasters from the disaster risk reduction perspective.

E Summary tables of direct material impacts in monetary terms

- E1a Summary table of direct material impacts by hazards types
 - E1b Summary table of direct material impacts by hazards types and geographic regions
- E tables mostly replicate the D_MAT tables and are for recording the impacts in monetary values, when it is relevant and possible, to calculate the direct economic losses, aligned with the Sendai Framework definition

F Agriculture

- F1 Summary of material impacts to Agriculture by hazards types

F1 was developed by FAO in alignment with requirements for Sendai Framework monitoring and for presentation in DRSF.

G Summary tables of direct environmental impacts

- G1 Summary table of direct environmental impacts by hazards types
- G2 Summary table of direct environmental impacts by hazards types and geographic regions

G tables extend the compilations on direct material impacts to include impacts to the environment.

DRRE Disaster risk reduction expenditure account

- DRRE_Activ. Production expenditure account (current plus investment) by characteristic activities
- DRRE_Trans. Transfers expenditure account and DRR National Expenditure

DRRE are satellite accounting tables developed to assess the feasibility for compiling DRR expenditure accounts based on existing data sources used in the national accounts or based on reporting from NDMA and other partner agencies.

A Summary of disaster occurrences

A1 Summary table of disaster occurrences, by hazards types, scale, and geographic region

Measurement units: counts of occurrences

		Geo Region 1		Geo Region 2		Geo Region 3		...		Adjustment for multiple counting of events by regions/states (-)		Adj. National total	
		National scale	Local scale	National scale	Local scale	National scale	Local scale						
	Very large events	Very large events	Very large events	Local scale events									
Geo-physical													
Hydrological													
Meteorological & Climatological													
Biological													
Other													
Total													

Data source: NDMA, national register of disaster occurrences, according to official national designation

International definition for a disaster: "A serious disruption of the functioning of a community or a society at any scale due to hazardous events interacting with conditions of exposure, vulnerability and capacity, leading to one or more of the following: human, material, economic and environmental losses and impacts." (UNGA, 2015)

Suggested variable for classifying scale of disasters: geographic scope of emergency (e.g. local scale, province-level, or national emergency). Generally, Large disasters are prone to extensive individual reporting while other events are reported on a statistical basis. The difference between calls for emergency at national and other scales will depend on the national context.

Adjusted National Total columns refers to the national total for number of disaster events, by scale and hazard type, adjusting for multiple counts across geographic regions.

B Selected Background Statistics and Exposure to hazards

B1a Population Background Statistics and Hazard Exposure by geographic regions

Measurement units: see column at right

		REGION					Measurement Unit
		Geo. Region 1	Geo. Region 2	Geo. Region 3	Geo Region ...	NATIONAL TOTAL	
1	Population	SDG 1.5.1, Sendai A1,B1	No. of people				
1.1	Children under 5 years						No. of people
1.2	Persons over 60 years						No. of people
1.3	Persons with disabilities						No. of people
2	Households						No. of households
3	Median Households disposable income						currency
3.1	Local currency (NAME...)						currency
3.2	US\$ PPP						US\$ PPP
4	GDP	SDG 1.5.2	currency				
4.1	Local currency (NAME...)						currency
4.2	US\$ PPP						US\$ PPP
5	Population in Hazard Area						No. of people
5.1	Geophysical						
5.1.1	High exposure						No. of people
5.1.2	Moderate exposure						No. of people
5.1.3	Low exposure						No. of people
5.2	Hydrological						
5.2.1	High exposure						No. of people
5.2.2	Moderate exposure						No. of people
5.2.3	Low exposure						No. of people
5.3	Meteorological & Climatological						
5.3.1	High exposure						No. of people
5.3.2	Moderate exposure						No. of people
5.3.3	Low exposure						No. of people
5.4	Biological						
5.4.1	High exposure						No. of people
5.4.2	Moderate exposure						No. of people
5.4.3	Low exposure						No. of people
5.5	Other [specify]						
5.5.1	High exposure						No. of people
5.5.2	Moderate exposure						No. of people
5.5.3	Low exposure						No. of people

Data sources: Joint work of NSO and NDMA, background statistics derived from NSO and from national accounts; exposure to hazards calculated by NDMA

Links to global indicators: Number of deaths attributed to disasters, per 100,000 population

Exposure is measured according to hazard area maps, produced using a variety of physical data inputs (see Chapter 2). Hazard maps are overlayed with social and economic statistics to estimate exposure. The ranking (high, moderate, low) refer to hazard probabilities - for example flood hazards are usually higher closer to the sources and depending on the slope and features of the terrain. The hazard may exist at lower probabilities, farther away.

B1b Population Exposure by social groups

Measurement units: Number of people

		C3a1 - Age groups			C2a2 - Sex		C2a3 - Urban/Rural population		C2a4 - Specific vulnerability groups		
		0-5	0-15	16-64	65+	Male	Female	Urban	Rural	SDG 1.5.1, Sendai A1,B1	SDG 1.5.1, Sendai A1,B1
1	Population	SDG 1.5.1, Sendai A1,B1	SDG 1.5.1, Sendai A1,B1	SDG 1.5.1, Sendai A1,B1							
2	Population in Hazard Areas										
2.1	Geophysical										
2.1.1	High exposure										
2.1.2	Moderate exposure										
2.1.3	Low exposure										
2.2	Hydrological										
2.2.1	High exposure										
2.2.2	Moderate exposure										
2.2.3	Low exposure										
2.3	Biological										
2.3.1	High exposure										
2.3.2	Moderate exposure										
2.3.3	Low exposure										
2.4	Meteorological & Climatological										
2.4.1	High exposure										
2.4.2	Moderate exposure										
2.4.3	Low exposure										
2.5	Other [specify]										
2.5.1	High exposure										
2.5.2	Moderate exposure										
2.5.3	Low exposure										

Data sources: joint work of NSO and NDMA; background statistics derived from population and housing census; maps of hazards calculated by NDMA

Links to global indicators: Number of deaths attributed to disasters, per 100,000 population

Exposure is measured according to hazard area maps, produced using a variety of physical data inputs (see Chapter 2). Hazard maps are overlayed with social and economic statistics to estimate exposure.

B2a Exposure of Land and Infrastructure by Hazard Type

Measurement units: see below table

		Geo-physical	Hydrological	Meteorological & Climatological	Biological	Other	NATIONAL TOTAL	Measurement Units
1	Critical infrastructures in Hazard Area							
1.1	Hospitals, health facilities							buildings, by type
1.2	Education facilities							buildings, by type
1.3	Other critical public administration buildings							sq m.
1.4	Public Monuments							sq m.
1.4.1	<i>Religious buildings</i>							
1.5	Roads							km
1.6	Bridges							m
1.7	Airports							buildings, by type
1.8	Piers							facilities, by type
1.9	Railways							km
1.10	Transport equipments							facilities, by type
1.11	Electricity generation facilities							facilities, by type
1.12	Electricity grids							facilities, by type
1.13	ICT Equipments							facilities, by type
1.14	Dams							facilities, by type
1.15	Water supply infrastructure							facilities, by type
1.16	Water sewage & treatment systems							facilities, by type
1.17	Other critical infrastructures							facilities, by type
2	Land							
2.1	Land							sq km
2.2	Agricultural land							sq km
2.3	Forest Areas							sq km
2.4	Built-up areas							sq km

Data source: Joint work of NDMA and official data source of land cover, land use, and infrastructure maps

Definitions for Critical Infrastructure: See DRSF Classification of Material Impacts (Chapter 8)

Land defined according to definition in SEEA Central Framework: "the space in which economic activities and environmental processes take place and within which environmental assets and economic assets are located."

Definitions for Agricultural land, forest areas, and built-up areas, see: DRSF Chapter 8.

Measurement units: Chapter 5

B Disaster Risk Reduction Expenditure Account

B3 Coping Capacity Background Statistics

		Geo Region 1	Geo Region 2	Geo Region 3	...	National	Measurement Units
1	GDP	SDG 1.5.2	Currency				
2	GDP per capita						Currency
3	Median Households disposable income						Currency
3.1	Local currency (NAME...)						Currency
3.2	US\$ PPP						US\$ PPP
4	Number of dwellings with slum designation						no. of units
5	Population living in areas with slum designation						no. of people
6 Early Warning Systems							
6.1	Population covered	Sendai G-3	No. of systems				
6.2	Share of population in exposure areas covered						%
6.3	Investment Expenditure (also DRRE_A, 3.2)						Currency
7 Household Preparedness							
7.1	Share of households with emergency plan						%
7.2	Share of households with backup storage of food and water						%
7.3	Share of households with improved access to water and sanitation						%
7.4	Other Preparedness (household level)						%
8 Environmental Resilience							
8.1	Forest area						sq km
8.2	Share of water bodies in good condition						%
8.3	Other ecosystem condition measures						
9 Risk Reduction Activity							
9.1	Disaster risk reduction characteristic transfers received						Currency
9.2	Disaster Risk Prevention						Currency
9.3	Disaster Risk Mitigation						Currency
9.4	Disaster Management						Currency
9.5	Disaster Recovery						Currency
9.6	General Government, Research & Development, Education Expenditure						Currency
10 DRRCA Transfers from Central to local government							
							Currency

Data Sources: Household Preparedness from Population and Housing Census and/or household surveys

Forest Area: national land cover statistics

Water and ecosystem assets from national water environment protection authorities

Risk Reduction Activity: Finance Ministry and National Accounts

Definition of Slums: UN-HABITAT (2016)

C Summary of Human Impacts

C1 Summary table of human impacts by hazards types

Measurement units: Number of people, except 1.5.3, which is number of days

		HAZARDS					NATIONAL TOTAL
		Geo-physical	Hydrological	Meteorological & Climatological	Biological	Other	
1 - Summary of Human Impacts							
	Human, affected population						
1.1	Deaths or missing	SDG 1.5.1/ Sendai A-1					
1.1.1	Deaths	Sendai A-2					
1.1.2	Missing	Sendai A-3					
1.2	Injured or ill	Sendai B-2					
1.2.1	Major injuries						
1.2.2	Minor injuries						
1.2.3	Illnesses						
1.3	Displaced						
1.3.1	Permanent relocations due to destroyed dwelling	Sendai B-4					
1.3.2	Other Displaced						
1.4	Dwellings Damaged						
1.4.1	Number of people whose houses were damaged due to hazardous events	Sendai B-3					
1.5	Loss of Jobs/occupations						
1.5.1	Direct losses of jobs/occupations in industry and services	Sendai B-5					
1.5.2	Direct losses of jobs/occupations in agriculture						
1.5.3	Losses of days of activity						
1.5.3.1	Direct losses of days of activity in agriculture						
1.5.3.2	Direct losses of days of activity in industry and services						
1.6	Number of people evacuated or receiving aid						
1.6.1	Number of people who received aid. Including food and non-food aid during a disaster						
1.6.2	Supported with evacuation						
1.6.3	Non-supported evacuations						
1.6.4	Number of people who received aid after a disaster						
1.7	Otherwise affected						
1.8	Total Human Impacts (no of impacts)	SDG 1.5.1/ Sendai B-1					
1.9	Multiple counts, individuals (minus)						
1.10	Total Human Impacts (no of people)						

Variables 1.4 an 1.3.3 based on measurement of damage and destruction to dwellings (material impacts tables)

Multiple counts is an adjustment for aggregation in terms of number of people (instead of number of impacts), see Chapter 6 for further explanation.

C2 Summary of human impacts by hazard type and geographic regions

Measurement units: Number of people, except 1.5.3, which is number of days

Variables 1.4 and 1.3.3 based on measurement of damage and destruction to dwellings (material impacts tables)

Multiple counts is an adjustment for aggregation in terms of number of people (instead of number of impacts), see Chapter 6 for further explanation.

C3 Summary table of affected population by demographic and social categories

Measurement units: Number of people, except 1.5.3, which is number of days

	C3a1 - Age groups	C3a2 - Sex			C3a3 - Urban/Rural population		C3a4 - Specific vulnerability groups		No TOTAL
		Male	Female	TOTAL	Urban	Rural	Disabled	Poor	
1 - Summary of Human Impacts									
Human, affected population		SDG 1.5.1/ Sendai A-1	SDG 1.5.1/ Sendai A-1	SDG 1.5.1/ Sendai A-1	SDG 1.5.1/ Sendai A-1	SDG 1.5.1/ Sendai A-1	SDG 1.5.1/ Sendai A-1	SDG 1.5.1/ Sendai A-1	SDG 1.5.1/ Sendai A-1
1.1 Deaths or missing	Deaths	Sendai A-2	Sendai A-2	Sendai A-2	Sendai A-2	Sendai A-2	Sendai A-2	Sendai A-2	SDG 1.5.1/ Sendai A-1

1.2 Injured or ill	Major injuries								Sendai A-3
1.2.1									Sendai A-3
1.2.2	Minor injuries								Sendai B-2
1.2.3	Illnesses								Sendai B-2
1.3 Displaced									
1.3.1	Permanent relocations due to destroyed dwelling Other displaced	Sendai B-4	Sendai B-4	Sendai B-4	Sendai B-4	Sendai B-4	Sendai B-4	Sendai B-4	Sendai B-4
1.3.2									Sendai B-4
1.4 Dwellings Damaged									
1.4.1	Number of people whose houses were damaged due to hazardous events	Sendai B-3	Sendai B-3	Sendai B-3	Sendai B-3	Sendai B-3	Sendai B-3	Sendai B-3	Sendai B-3
1.5 Loss of jobs/occupations									
1.5.1	Direct losses of jobs/occupations in industry and services	Sendai B-5	Sendai B-5	Sendai B-5	Sendai B-5	Sendai B-5	Sendai B-5	Sendai B-5	Sendai B-5
1.5.2	Direct losses of jobs/occupations in agriculture								
1.5.3	Losses of days of activity								
1.5.3.1	Direct losses of days of activity in agriculture								
1.5.3.2	Direct losses of days of activity in industry and services								
1.6 Number of people evacuated or receiving aid									
1.6.1	Number of people who received aid. Including food and non-food aid during a disaster								
1.6.2	Supported with evacuation								
1.6.3	Non-supported evolutions								
1.6.4	Number of people who received aid after a disaster								
1.7 Otherwise affected									
1.8 Affected Population (no of impacts)	SDG 1.5.1/ Sendai B-1	SDG 1.5.1/ Sendai B-1	SDG 1.5.1/ Sendai B-1	SDG 1.5.1/ Sendai B-1	SDG 1.5.1/ Sendai B-1	SDG 1.5.1/ Sendai B-1	SDG 1.5.1/ Sendai B-1	SDG 1.5.1/ Sendai B-1	SDG 1.5.1/ Sendai B-1
1.9 Multiple counts, individuals									
1.10 Total Human Impacts (no of people)									

Urban and rural designations according to national definitions

Designation for 'poor' according to national poverty line (or, if unavailable, World Bank global absolute poverty line)

Multiple counts is an adjustment for aggregation in terms of number of people (instead of number of impacts); see Chapter 6 for further explanation.

D Summary tables of direct material impacts

D1a Summary table of direct material impacts by hazards types

Measurement unit: see column at right

	Geo-physical	Hydrological	Hazard types			TOTAL	Measurement unit				
			Meteorological & Climatological	Biological	Other						
Direct economic material impacts											
1-Direct impacts on fixed assets or consumer durables											
1.1 Dwellings (number)							no. of units				
1.1.1 Dwellings destroyed (number)							no. of units				
1.1.2 Dwellings damaged (number)							no. of units				
1.2 Buildings and structures							sq. km				
1.2.1 Critical buildings & structures	Sendai D-4	Sendai D-4	Sendai D-4	Sendai D-4	Sendai D-4	Sendai D-4	sq. m				
1.2.2 Other buildings and structures							sq. m				
1.3 Machinery and equipment											
1.3.1 Critical machinery and equipment	Sendai D-4	Sendai D-4	Sendai D-4	Sendai D-4	Sendai D-4	Sendai D-4	no. of units				
1.3.2 Other machinery and equipment							no. of units				
1.4 Consumer Durables							no. of units				
2-Direct impacts on valuables (SNA asset definition)											
2.1 Art objects, music instruments							no. of units				
2.2 Other valuables							no. of units				
3-Natural resources											
3.1 Land, incl. soil							sq. km				
3.2 Agriculture land							sq. km				
3.3 Primary forests							sq. km				
3.4 Livestock							no. of units				
3.5 Fish stocks							tonnes				
3.6 Freshwater							sq. km				
3.7 Other natural resources							sq. km				
4-Critical goods & services											
4.1 Inventories (SNA asset definition)											
4.1.1 Agriculture (incl. immature crops)							tonnes				
4.1.2 Inventories/ other products							tonnes				
5-Critical infrastructures [1.2.1]											
5.1 Hospitals, health facilities	Sendai D-2	Sendai D-2	Sendai D-2	Sendai D-2	Sendai D-2	Sendai D-2	no. of units				
5.2 Education facilities	Sendai D-3	Sendai D-3	Sendai D-3	Sendai D-3	Sendai D-3	Sendai D-3	no. of units				
5.3 Other critical public administration buildings	Sendai D-4	Sendai D-4	Sendai D-4	Sendai D-4	Sendai D-4	Sendai D-4	no. of units				
5.4 Public monuments							no. of units				
5.4.1 Religious buildings							no. of buildings				
5.5 Roads							km				
5.6 Bridges							no. of units				
5.7 Railways							km				
5.8 Airports							no. of units				
5.9 Piers							no. of units				
5.10 Transport equipments							no. of units				
5.11 Electricity generation facilities							no. of units				
5.12 Electricity grids							no. of units				
5.13 ICT Equipments							no. of units				
5.14 Dams							no. of units				
5.15 Water supply infrastructure							no. of units				
5.16 Water sewage & treatment systems							no. of units				
5.17 Other critical infrastructures (specify)							no. of units				
6-Direct impact on cultural heritage											
6.1 Direct impact on cultural heritage zones											
6.1.1 UNESCO cultural heritage sites							sq. km				
6.1.2 National cultural heritage designations							sq. km				
6.1.3 Urban heritage							sq. km				
6.1.4 Other heritage designations							sq. km				
6.2 Direct impact on cultural heritage objects											
6.2.1 Buildings and monuments							no. of units				
6.2.2 Cultural heritage valuables [2]							no. of units				
6.2.3 Other cultural heritage (please specify)							no. of units				

For definitions see Material Impacts Classification in Chapter 8

Distinguishing between damaged or destroyed is feasible for all variables and may be reported depending on demand. For the case of dwellings, destroyed dwellings results in displacement whereas a damaged dwelling might be repaired without displacement.

D1b Summary table of direct material impacts by hazards types and geographic regions
Measurement unit: see column at right

E Summary tables of direct material impacts in monetary terms

E1a Direct material impacts by hazards types

Measurement units: national currency (estimated costs for recovery of damages)

Monetary valuation for costs of material impacts normally requires a combination of data sources, particularly: assessments for cost of reconstruction, insurance claims assessments or the recorded values of assets prior to a disaster (where available), records of actual transactions for recovery of damages, i.e. expenditure on post-disaster reconstruction.

For definitions, refer to DRSF, Chapter 8 and current international standards, such as the System of National Accounts (SNA, 2008).

E1b Summary table of direct material impacts by hazards types and geographic regions
Measurement units: national currency (estimated cost of damages)

Measurement units : national currency (estimated cost of damages)

Monetary valuation for costs of material impacts normally requires a combination of data sources, particularly: insurance claims assessments or assessments for cost of reconstruction, the recorded values of assets prior to a disaster (where available), records of actual transactions for recovery of damages, i.e. expenditure on post-disaster reconstruction, and average costs of crops or other exposed assets for estimating costs of damages based on average per unit values.

F Material impacts to Agriculture

F1 Summary of material impacts to Agriculture by hazards types

				Hazard types					
				Geo-physical	Hydrological	Meteorological & Climatological	Biological	Other	TOTAL
1-Crops									Measurement units
1.1	Area affected by crop type	SDG 1.5.2, Sendai C-2	SDG 1.5.2, Sendai C-2	SDG 1.5.2, Sendai C-2	sq. km				
1.2	Stored produce destroyed	Sendai C-2	Sendai C-2	Sendai C-2	tonnes
