

PARIS21 New publication: Guide on Geospatial Data Integration in Official Statistics

We can get a much clearer picture of the development challenges faced by humans and the environment when data from national statistical offices (NSOs) are combined with geospatial data. But integrating traditional data and geospatial data requires a tactical approach. This guide provides comprehensive, step-by-step guidance for NSOs in low and middle-income countries to overcome challenges and seize opportunities to obtain better data for better lives.
