Tapping into administrative data in census-taking: an emerging trend in Asia and the Pacific

An increasing number of countries in Asia and the Pacific are exploring the use of administrative data sources as an addition or alternative to full field enumeration in censuses. While some are aiming to eliminate field enumeration altogether, others are using administrative data to improve the quality and efficiency of a traditional census approach. This Stats Brief overviews how some of the National Statistical Offices in Asia and the Pacific are integrating administrative data into their censuses.

This Brief is part of the ESCAP's work on population registers and censuses under the Bloomberg Philanthropies Data for Health Initiative (D4H) Project: "Supporting improvements to civil registration and vital statistics (CRVS) systems in Asia and the Pacific (Phase III)".
