Asia-Pacific Stats café series:
SEEA for Climate Change: Why and How?
Monday, 13 June 2022, 12.00–13.00h (UTC+7)

Climate change is one of the most pressing issues of our time. And one of the important facets of climate change is its relationship to economic activities. Our production and consumption patterns, especially of energy, have resulted in increased emissions of greenhouse gases which in turn has exacerbated global warming. Improving our understanding of the climate change and economy nexus is key to adopting and mitigating the impacts of climate change.

The System of Environmental Economic Accounting (SEEA) is the international statistical standard that contains the agreed methodology for measuring the relationship between the economy and the environment. Countries in Asia-Pacific are implementing the SEEA and disseminating statistics that inform climate change. During this Stats Café, colleagues from NSOs in India, Indonesia and New Zealand will share their experience in using SEEA accounts to compile information relevant to climate change.

Opening Remarks
Shailja Sharma
Director, SIAP

Speaker
Adam Tipper
Senior Analyst
Statistics New Zealand

Speaker
Zanial Fahmi Firdaus
Statistician
Statistics Indonesia

Speaker
Sudeepta Ghosh
Joint Director
National Statistical Office, India

Moderator
Sokol Vako
Statistician/Lecturer
SIAP
